

**Clean Version of Pending Claims**

**INTEGRATION OF INTERNET SOURCES INTO AN ELECTRONIC PROGRAM  
DATABASE LIST**

Applicant: Theodore D. Wugofski et al.  
Serial No.: 09/002,944

- Sub  
C1
1. (Amended) An information handling system, comprising:  
a graphical user interface;  
wherein the graphical user interface is configured to display a channel list including at least one television channel and at least one scheduled internet channel concurrently, and is further configured to provide at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.
2. (Unchanged) The information handling system of claim 1, wherein the channel list is a favorite channels list.
- B
3. (Unchanged) The information handling system of claim 1, wherein the graphical user interface includes an electronic program guide configured to display the channel list.
4. (Unchanged) The information handling system of claim 1, further comprising an electronic program database for storing the channel list.
5. (Unchanged) The information handling system of claim 1, further comprising a convergence system which includes the information handling system.
- Sub  
C2
6. (Amended) A computerized system for integrating internet sources into an electronic program database comprising:  
one or more television channels;  
one or more scheduled internet channels;  
one or more channel lists integrating the television channels and the internet channels;

507  
C2  
a means for storing each one of the channel lists; and  
one or more user interfaces providing at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.

7. (Unchanged) The computerized system of claim 6, further comprising a means for displaying a selected one of the channel lists wherein each one of the channel lists contains one or more stored properties for the means for displaying.

8. (Unchanged) The computerized system of claim 7, wherein at least one of the stored properties relates to a graphical attribute of the means for displaying.

B1  
cont.  
9. (Unchanged) The computerized system of claim 7, wherein at least one of the stored properties relates to a behavioral attribute of the means for displaying.

11. (Amended) The computerized system of claim 6, wherein the user interfaces provide a management function of selecting the channel list.

13. (Amended) The computerized system of claim 6, wherein the graphical user interface is a channel banner graphical user interface.

14. (Amended) The computerized system of claim 6, wherein the graphical user interface is a favorite channel list graphical user interface.

507  
C3  
15. (Amended) A computer-readable medium having computer-executable components comprising:

a database component for storing one or more channel lists, at least one of the channel lists integrating one or more television channels and one or more scheduled internet channels; and

Sub C3  
~~a user interface component for displaying the channel lists and providing at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.~~

16. (Unchanged) The computer of claim 15, wherein the computer-readable medium comprises a memory.

Sub C4  
B1 cont.  
~~17. (Amended) A computer comprising:~~

~~a processor;~~

~~a computer-readable medium;~~

~~a display device; and~~

~~at least one application program, each application program executed by the processor from the computer readable medium to provide one or more channel lists for viewing on the display device wherein the channel lists integrate one or more television channels and one or more scheduled internet channels, and further to provide a graphical user interface for providing at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.~~

18. (Unchanged) The computer of claim 17, wherein the computer-readable medium comprises a memory.

Sub C5  
~~19. (Amended) A method of integrating sources in a convergence system, the method comprising the steps of:~~

~~including at least one television channel and at least one scheduled internet channel concurrently in a channel list;~~

~~storing the channel list in a database;~~

~~displaying on a display device the channel list; and~~

~~displaying a graphical user interface on the display device wherein the graphical user~~

507  
C57  
interface is configured to provide at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.

20. (Amended) An information handling system, comprising:

B1  
cancel.  
a graphical user interface;

wherein the graphical user interface is configured to display a channel list including at least one television channel and at least one scheduled internet channel concurrently, wherein the channel list includes graphical and behavioral attributes to determine the graphical user interface for the channel list when displayed in an electronic program guide, and is further configured to provide at least one management function selected from a group consisting of: adding the television channel, adding the internet channel, removing the television channel, and removing the internet channel.
